- The Air Silk range of products are smaller version of Premier Silk designed to be easily carried in your purse, in the car, as an alternative colour or as a gift for your friends.

- Air Silk will provide you 10-15 easy applications.

# Frequently Asked Questions

## How was AirStocking Invented?

AirStocking is a revolutionary spray on silk cosmetic developed to provide instantly flawless legs. The patent pending scientific formulation was originally designed as an intelligent alternative to the traditional nylon stocking, without the constricting, tight feeling, worries of snags and runs etc. AirStocking was developed by a leading cosmetic inventor, Dr. Hamada of C.C.Medico, Japan, who was asked one day by one of his female co-workers whether it was possible to invent such a special product?

## Is AirStocking similar to a spray on fake tan?

It is far superior and in a class of its own. If you want an intelligent, hassle free alternative or if you just want to have the appearance of 'Flawless Silk Legs' it's that too or maybe just an alternative exposing your beautiful legs to the harsh NZ sun. AirStocking won't stain your skin, it simply washes off!

## How does it work?

Revolutionary technology has enabled scientists to create a very special silk based formulation that when combined with natural ingredients, that the skin recognizes will not stain the skin, smell or streak and provides 'Flawless Silk Legs'. By using the best available natural ingredients with AquaSilk the result is a 'leg tonic' with moisturizers and beautiful colouration to your desired finish.

## How long does a container of AirStocking last?

It depends on the surface area of your legs and how much you use, however a general rule of thumb is 20-25 pairs of legs for Premier Silk and 10-12 for Air Silk. The special silk base formulation enables you to create 'perfect spreadability', and fragrance free, because it was designed by scientists with ladies perfection in mind!

## How do I apply and remove AirStocking?

AirStocking product formulations contain a large amount of AquaSilk (Hydrolyzed Silk) because they are designed to provide the maximum flawless perfection for the skin in the form of a beautiful silk coating. This means that you must shake the can well before use, at least 10 times, and only spray in short bursts of 3-4 seconds.

Apply the spray to the desired area approximately 15-20 cm away, being careful to avoid over spray, then caress softly with your fingers over the skin to create your own beautiful flawless look.

Leave for 2-3 minutes until dry, test with your finger. Water will roll straight off and not smudge or affect the beautiful silk coating you have created.

To remove simply apply cleanser to your skin and wash off.

## Does it adhere to clothing even after it dries?

No. Remember that you don't need to cake it on thickly just spray as per the instructions and spread with your hands to create the flawless silk finish. You don't have to rub it in because it dries so quick at approximately 2-3 minutes, then test with your finger and you are ready to flaunt imperfection.

## Has the formulation been allergy tested?

Yes. It has been tested on a variety of skin types and colours. If you have very sensitive skin then we suggest a patch test 24 hours before you purchase your AirStocking product.

## Can I moisturize before applying AirStocking?

Yes, but no less than 30 minutes before applying AirStocking allowing any oils or lotions to penetrate into your skin. If you still have any cremes or lotions on the surface of your skin then wipe them off.

## Are there any special precautions?

Always keep your AirStocking product in a safe place and do not place it anywhere near flame, heat or leave in the sun, or store in a poorly ventilated or humid cupboard, keep out of reach from children, and do not spray near the face, eyes or mouth.

## Why is AirStocking an intelligent option for New Zealand Women?

By using AirStocking you are able to create your desired skin colour and finish instantly, without exposing your precious skin to the risk of excess UV exposure, sun bedding, or the hassle of fake tanning. The NZ environment creates a high risk of skin cancer because of its location under the depleted ozone layer, intense summer sun and cool winds. Stay beautiful!
